Emp ID: 85011029

1. Flipkart – Flipkart Order Lifecycle

State Transition

Created → Approved → Packed → Ready to Dispatch → Shipped → Out for Delivery → Delivered → Completed

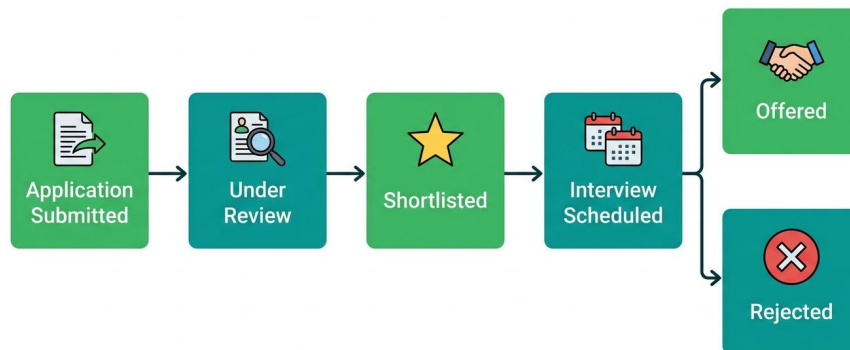

Alternate Paths: Any state (Created through Out for Delivery) → Cancelled | Delivered / Completed → Returned

Test Cases

TC ID	Scenario	Expected Result
TC1	Place a new order and complete payment verification.	Order status changes from 'Created' to 'Approved'; seller is notified of the confirmed order.
TC2	Cancel the order while it is in the 'Packed' state.	Order status changes to 'Cancelled'; the order is removed from the dispatch queue and no further shipment processing occurs.
TC3	Track the order as it moves from 'Shipped' to 'Out for Delivery' to 'Delivered'.	Order status updates sequentially through each stage and finally reflects 'Delivered' once the customer receives the item.
TC4	Initiate a return request after the order status is 'Delivered' and within the return window.	Order status changes to 'Returned' and the return process is initiated successfully; after the return window expires the order becomes 'Completed'.

2. Naukri – Naukri.com Job Application State Transitions

Naukri.com: Job Application State Transitions

State Transition

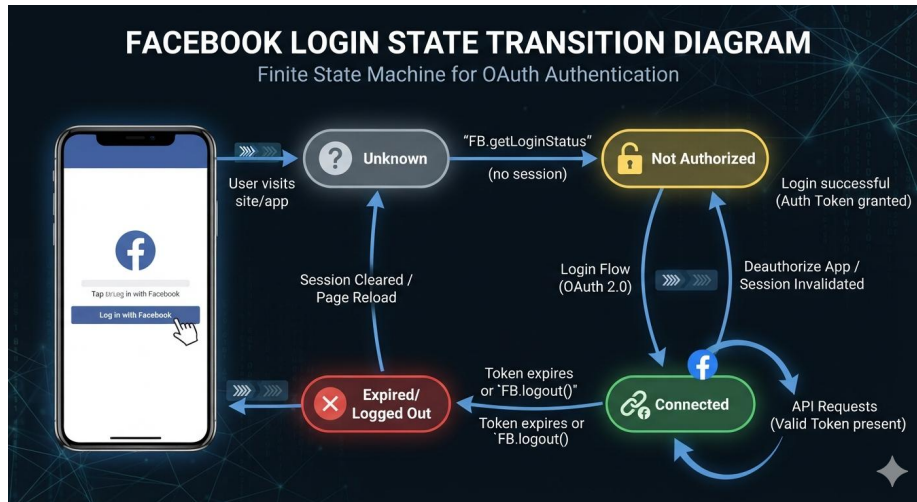

Application Submitted → Under Review → Shortlisted → Interview Scheduled → Offered

Alternate Path: Interview Scheduled → Rejected

Test Cases

TC ID	Scenario	Expected Result
TC1	Candidate submits a job application on Naukri.com.	Application status is set to 'Application Submitted' and is visible under the candidate's applied jobs list.
TC2	Recruiter opens and reviews the submitted application.	Status moves from 'Application Submitted' to 'Under Review', and further to 'Shortlisted' once the recruiter approves the profile.
TC3	Recruiter schedules an interview for a shortlisted candidate.	Status updates to 'Interview Scheduled' along with the interview date and time details.
TC4	Recruiter rejects the candidate after the interview round.	Status changes to 'Rejected'; candidate is notified and no further state transition is allowed for this application.

3. Facebook – Facebook Login State Transition Diagram

State Transition

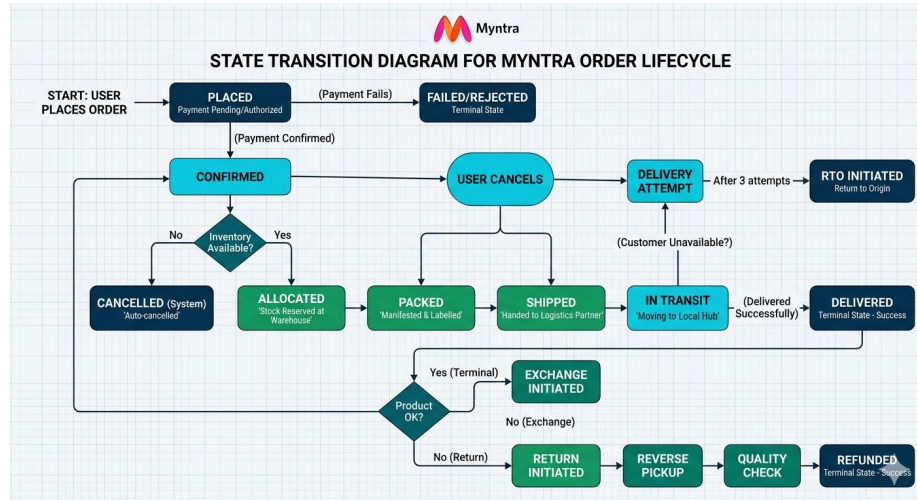

Unknown → Not Authorized → Connected

Alternate Paths: Connected → Not Authorized (Deauthorize App / Session Invalidated) | Connected → Expired/Logged Out (Token Expires or FB.logout()) | Expired/Logged Out → Unknown (Session Cleared / Page Reload)

Test Cases

TC ID	Scenario	Expected Result
TC1	A new user visits the site/app with no existing Facebook session.	Login state begins as 'Unknown'; <code>FB.getLoginStatus()</code> is called and returns 'no session', moving state to 'Not Authorized'.
TC2	User clicks 'Log in with Facebook' and completes the OAuth 2.0 login flow successfully.	Auth token is granted and the state transitions from 'Not Authorized' to 'Connected'.
TC3	The access token expires, or <code>FB.logout()</code> is invoked while the user is 'Connected'.	State transitions to 'Expired/Logged Out'; API requests using the old token are no longer authorized.
TC4	User deauthorizes the app, or the session is invalidated while in 'Connected' state.	State reverts to 'Not Authorized'; user must complete the login flow again to reconnect.

4. Myntra – State Transition Diagram for Myntra Order Lifecycle

State Transition

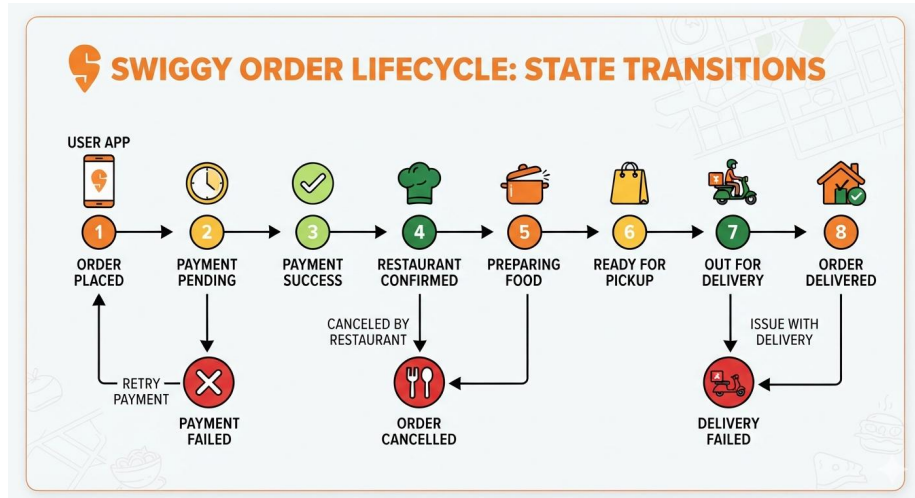

Placed → Confirmed → Allocated → Packed → Shipped → In Transit → Delivered

Alternate Paths: Placed → Failed/Rejected (Payment Fails) | Confirmed → Cancelled-System (Inventory Not Available) | Confirmed → User Cancels → Delivery Attempt → RTO Initiated (after 3 failed attempts) | Delivered → Exchange Initiated OR Return Initiated → Reverse Pickup → Quality Check → Refunded

Test Cases

TC ID	Scenario	Expected Result
TC1	User places an order and the payment fails during checkout.	Order status changes to 'Failed/Rejected', which is a terminal state; user is asked to retry the order.
TC2	Payment is confirmed for an order, but inventory is not available at the warehouse.	Order is auto-cancelled by the system, and status changes to 'Cancelled (System)'.
TC3	Delivery is attempted 3 times for a confirmed order, but the customer is unavailable each time.	Order status changes to 'RTO Initiated' (Return to Origin) after the 3rd failed delivery attempt.
TC4	Customer receives a delivered product but is unsatisfied and requests a return.	Status moves from 'Delivered' → 'Return Initiated' → 'Reverse Pickup' → 'Quality Check' → 'Refunded' on successful quality check.

5. Swiggy – Swiggy Order Lifecycle: State Transitions

State Transition

Order Placed → Payment Pending → Payment Success → Restaurant Confirmed → Preparing Food → Ready for Pickup → Out for Delivery → Order Delivered

Alternate Paths: Payment Pending → Payment Failed → (Retry Payment) → Order Placed | Restaurant Confirmed / Preparing Food → Order Cancelled (Cancelled by Restaurant) | Out for Delivery → Delivery Failed (Issue with Delivery)

Test Cases

TC ID	Scenario	Expected Result
TC1	User places an order on Swiggy and the payment transaction fails.	Status changes to 'Payment Failed'; user is prompted to retry payment, and on retry the order returns to 'Order Placed' state.
TC2	Restaurant cancels the order after it was already confirmed.	Status changes from 'Restaurant Confirmed' to 'Order Cancelled'; user is notified and refund process is triggered.
TC3	Verify the normal order flow from 'Payment Success' through to 'Order Delivered'.	Status transitions sequentially through 'Restaurant Confirmed' → 'Preparing Food' → 'Ready for Pickup' → 'Out for Delivery' → 'Order Delivered'.
TC4	Delivery partner is unable to deliver the order because the customer is unreachable.	Status changes from 'Out for Delivery' to 'Delivery Failed'; support process is initiated for resolution.
